

israel

the small country of israel is producing one of the finest fibres in the world, predominantly used in high end apparel and home textiles.

locally bred seeds of pima(*barbadense*) and acalpi(*hirsutum x barbadense*) - all non-GMO - are fostered into the following qualities

israel pima	37-38 mm	3.7-4.5 ncl	40-43 gpt
israel acalpi	34-36 mm	3.4-4.2 ncl	34-37 gpt

cotton growing in israel is considered to be the most modern in the world. by utilization of key technologies, best quality and world wide highest yields are ensured.

all israel cotton is **gps-based** and **machine** harvested before it is quality-preservingly **roller ginned**. the homogeneously outstanding quality is closely monitored through gapless **stikiness** and **HVI testing** while all data is being recorded in a **bale-to-field traceable database** and assorted into quality categories.

production in tons

	2014	2015	2016	2017	2018	2019
israel pima	11 200	16 500	13 000	10 000	5 400	4 000
israel acalpi	2 500	130	2 000	2 000	3 500	4 200
